6:30 pm	Dinner	

Synopsis

Dental sterilization practices in dentistry protect patients, dentists and the whole team. It prevent the growth of bacteria on instruments and surfaces throughout the dental practice.

Sterility assurance is a cornerstone of a successful infection prevention program, and an effective sterilization protocol will help ensure the delivery of safe care. Once dental instruments become contaminated, reprocessing for subsequent use is a multi-step procedure that involves cleaning, packing and disinfection or sterilization.

We would like to invite you to attend our upcoming education event to gain invaluable insights and knowledge on this learning journey.

Moderator

Sok Kee Lee

Activation Marketing Manager,
3M Medical Solution Division
