# MAKEOVER IN PROSTHODONTICS: HOW FAR DOES IT GO?

 **24 July 2024 (Wednesday)**  **20:30 - 22:00**

**Speaker:**

**Dr. Noor Huda Ismail**

Dr. Noor Huda Ismail is a prosthodontist and lecturer at the School of Dental Sciences, Universiti Sains Malaysia (USM).

The defective tooth is traditionally restored with gold crown to clear away unattractive smile or discolouration. It was a luxury makeover in dentistry in addition to other functions, such as chewing and speech. Instead, advanced tooth-coloured materials and 3D dental technology to makeovers are crucial. Accordingly, a minimally invasive procedure is the primary concern of any prosthodontic treatment.

This webinar discusses the advanced materials and system to reduce destructive tooth structure and the challenge of achieving an ideal occlusion after a makeover based on currently available evidence.
